ALCI Vision One

ALCI GROUP present the innovative project for 4.0 Industry "ALCI VISION ONE", an interconnecting and Data Analyst software for centrifugal extractors dealing and Remote Management.

Technical specifications, Standard and Optional

Alci Group introduce the new "VISION ONE" App, suitable for PC and Smartphone, for supervising in real time centrifugal extractor's performances. The App, settled with low cost, give the possibility to storage and record in Cloud all the benchmark values of Decanter - like the energy uptakes, working times, in and out flow (if flow meter installed) repetition numbers, alarm history and their settings on time-line, for a long-time analysis. At first, another deployment, based on the same history working, will improve scheduled maintenance times, and after result will give you an effective programmable maintenance time sheet. Collected data - after your license, could be read also by our technical Team for giving you support and services and identify maintenance times, development for processed goods optimizing and for suggesting solution about functional problems or process.

System Requirements

- Router with SIM Card or Wired
- PLC

Cloud storage
and Plant Analysis in Time
